Enhanced File Transfer™ (EFT™) Enterprise Modules

KEY BENEFITS

- Keep data out of the DMZ
- Maintain compliance with a variety of standards
- Secure data at rest and in transit
- Get visibility into the data transferred
- Support browser-based transfers over HTTPS
- Support secure transfers over SFTP
- Copy, move, and download files automatically based on event triggers
- Trigger events based on changes to monitored folders
- Schedule data transfers and notifications
- Secure mobile access to data on EFT
- Share data with internal and external users in secure, browser-based workspace
- Send/receive large email attachments over a browser or through Microsoft Outlook
- Process files with antivirus or DLP solution
- Design and manage advanced workflows
- Transfer data over AS2 protocol
- Monitor activity in real-time

Enhanced File Transfer (EFT) Enterprise is a customizable managed file transfer platform, trusted by thousands of businesses worldwide, for its unmatched simplicity and military-grade security. EFT Enterprise gives you automated processes, two-factor authentication, easy installation and administration, and intuitive interfaces.

Licensing

The flexible, modular approach to the licensing is accompanied by a per server-instance license. There are no limitations on the amount of connections, users, bandwidth, or CPU utilization for the product. Except in the case of the file sharing modules, which are licensed per user. All module features are available during the 30-day trial.

Security:

- **Content Integrity Control module** - The Content Integrity Control module is used to send files to an antivirus scanner or DLP solution for processing.

- **DMZ Gateway®** - Our multi-platform, multi-layered security solution does not store or process data. It's simply a liaison through the "Demilitarized Zone" to your internal network. Your proprietary data always remains safe behind the firewall for EFT to store and process.

- **High Security module** - The High Security Module (HSM) achieves or exceeds security practices mandated by the most rigorous standards, such as PCI DSS, FIPS 140-2, HIPAA, and Sarbanes-Oxley (SOX).

- **OpenPGP module** - Secure your "data at rest" on a server using OpenPGP data encryption technology.

Workflow automation:

- **Advanced Workflow Engine** - With secure file transfer at the center of so many business-critical processes, security is only the first aspect of a much greater IT concern. When information consumers in your organization rely on manual and intermittent batch processes to deliver the data they need, day-to-day productivity becomes dangerously vulnerable to manpower limitations, vacations, turn-over, and simple human error. Workflow management is a critical component of any enterprise file transfer system, and the Advanced Workflow Engine Module helps to automate business processes.

Protocols:

- **AS2 module** - The Applicability Statement 2 (AS2) module gives EFT the ability to transfer data using AS2 and the HTTP or HTTPS protocol. AS2 is widely used to transfer Electronic Data Interchange (EDI) messages, but may be used to transfer other types of data. AS2 specifies how to connect, deliver, validate, and acknowledge data, and creates an envelope for a message, which is then sent securely over the Internet.

Visibility:

- **Auditing and Reporting module** - Save time by running dozens of reports in seconds with our advanced auditing and reporting module. Spend your time productively rather than spending hours combing through enormous piles of data.

- **Business Activity Monitoring (BAM) module** - Real-time activity monitoring for admins, partners and end users. Track transfers, review statistics and query reports.

Ad hoc file transfers:

- **Mobile Transfer Client -** Secure anytime, anywhere access to information on EFT.

- **Secure Ad Hoc Transfer™** - EFT's Secure Ad Hoc Transfer (SAT) module allows your internal users to send and receive large email file attachments to/from recipients outside of your organization quickly, reliably, and securely, all without having to manually create or maintain FTP accounts on EFT.

- **Web Transfer Client** - Provide your business partners with access to EFT with our thin web client that can be used on any modern browser, leaving a small footprint that's easy on your resources.

- **Workspaces™ module** - Workspaces is an enterprise secure file sharing solution that allows employees to easily and securely exchange folders and their files with internal and external users, without sacrificing the highest levels of control, visibility, and governance. The Workspaces module for EFT is the only file, sync, and share solution that supports customizable workflow automation.

- **Mail Express®** - Mail Express is the easiest and most secure way to send, receive, and respond to large files of unlimited size via email. Mail Express is the secure, safe solution compared to third-party "box" technologies.
